The late coherent return does not establish a canonical-specific advantage
L=12, original G=4: retrospective pilot
Exact
rpa, q=2
rpa, q=3
direct, q=3
witness, q=3
Finite-angle echo excess
Time after training
L=16, original G=4: retrospective pilot
Exact
rpa, q=2
rpa, q=3
direct, q=3
Finite-angle echo excess
Time after training
New spectrum / coupling forecasts, elapsed time 2
Exact
RPA q=3
Echo excess after 25% count dephasing
Eight new physical conditions (L12, then L16)
Identical initial state: L16, G=3.6, cubic spectrum
direct
rpa
Exact
Dephased echo excess
Retained orbital directions per band
