Competing-channel screen: a concrete Pauli mechanism, with no chirality claim
Pauli-generated angular channels outside the interaction
Fraction within one-transfer sector
Time
L=12
L=16
Riccati prediction
Conditional fractions retain their success probability
Probability in the full state
Time
L=12
L=16
Negative values also arise with only one interaction channel
Normalized fourth pair moment
Time
eta=0
eta=1
Explicit single-real-orbital counterexample: phase moment = -1
Squared overlap
Real orbital
Chiral +
Chiral -
