Runtime includes setup, solver, validation, proposals, mass estimate, refit and observables
A. All solve and sampling costs are charged
1.51e+03 ms
21.4 ms
7.29 ms
Share of complete elapsed time (%)
Solve + original validation
Proposals + mass estimate
Coefficient refit
Two-node construction
Setup + propagation + other
API + sampling
Newton + sampling
Newton + 2 nodes
B. Less frequent solves reduce total time
One seed; exploratory spacing sweep
Total elapsed time (ms)
Peak propagated branches
Steps between compressions
C. Branch growth between compression events
API + sampled refit
Newton + 2 nodes
Raw measure sampling (fails)
Branches after each step
Time
